PPP reserves the right to change prices of the Freight Guaranteed Program based on additional fuel surcharges imposed after March 1, 2011.

ESTIMATED SHIPPING WEIGHT SYMBOLS

- * Shipped via LTL Truck Shipment. Dimensions exceed UPS limits.

2.4 GHz Wireless Synchronized Clock System

WCMNT5-2.4
2.4 GHz Master Clock

WR2.4
2.4 GHz Wall Repeater

The 2.4 GHz Wireless Synchronized Time System provides a multi-path mesh network for clock-to-clock transmission of synchronized time, eliminating the time related issues and liabilities associated with manual time setting.

This easy-to-install system will provide years of trouble free service without the cost of expensive wiring. The master transmitter obtains time updates from a network timeserver or optional GPS receiver. The time signal is then broadcast to all clocks once per second. Automatic Daylight Savings Time adjustments. Each battery-operated clock transmits up to 150 feet in all directions, repeating the synchronized time signal clock-to-clock, throughout an entire facility.

NRC – Noise Reduction Coefficients

The Noise Reduction Coefficient (NRC) is a scalar representation of the amount of sound energy absorbed upon striking a particular surface. An NRC of 0 indicates perfect reflection; an NRC of 1 indicates perfect absorption. In particular, it is the average of four sound absorption coefficients of the particular surface at frequencies of 250 Hz, 500 Hz, 1000 Hz, and 2000 Hz. These frequencies encompass the fundamental frequencies and first few overtones of typical human speech, and, therefore, the NRC provides a decent and simple quantification of how well the particular surface will absorb the human voice.
